

Your Data, Enabled

epConnect™ does the heavy lifting for you

epConnect
80% of your
project is
already designed.

epStudio
for the
last 20%

epStudio

The epConnect platform allows you to focus on your data and meet up to 80% of your application needs. Customers can use epStudio to leverage epSensors, epGateway, and epCloud to develop the remaining 20% of the solution. Prototypes can be created using epConnect to allow customers to determine ROI for their IoT project. Embedded Planet can create and maintain the complete solution for customers using epConnect.

Product Design Services

Software and Hardware can be designed for sensors, gateway and cloud to create a complete customer specific IoT solution. Includes database, industrial design, mobile and device UI design.

IoT ROI

Prototypes based on epConnect can be used to determine the real value of IoT for you and your customers. This allows you to verify the financial benefit before you develop the final product.

Solution Management

EP can manage the complete IoT solution for you while making sure you have access to your data to improve your business. EP can manage the entire life cycle of your IoT solution.
